How to Download Firmware for Canon ImageRunner DR310 (iR2270 Printer)? well-being of others, and the benefit of the members. It is a truth that no other political party can replace. It is something that can only be achieved through mutual cooperation. The Northern League has four pillars: - Victory and continuity is the only way out. The clear reform strategy of the PD is to consolidate every area of the country. We will only be able to bring about reforms that are important for the entire country and that benefit the entire Italian people by defending the interests of the north, for example in relation to the land. - A strong economy. We believe that the economy of Lombardy and Piedmont is strong enough to expand its own economy thanks to a national government that is also solid. - The third and final pillar. "Alternative politics". We have always said that politics should serve the people, and that are only small parties who do not believe in the system or are prevented from doing what we do. We know that these people do not believe in the objectives of the party and have no motivation to fight for them. I urge all of our democratic and civic forces to join us and not sink, like the Democratic Party, into those quagmires that are taking them towards the abyss. - The fourth and final pillar 50b96ab0b6

Show that M_n/R is homomorphic to M_n Let M_n be the space of all complex n -by- n matrices. Let R be the ideal of the matrices A such that $\det A = 0$. Show that M_n/R is homomorphic to M_n (i.e. the two groups are isomorphic). I tried using some fact that makes this a direct sum of a finite dimensional space which has a basis that I can use. But not able to find out how to do it. Please help! A: Take the basis $\{e_{ij}\}_{1 \leq i, j \leq n}$ of M_n , where e_{ij} is the matrix with 1 in the i -th column and j -th row, and zero elsewhere. The relation R is the kernel of the polynomial p given by $p(X) = \det(1 - X)$. Thus, the elements of M_n/R are the classes of $A = \sum_{i=1}^n \alpha_i e_{ii}$ modulo R , and $A \mapsto (\alpha_1, \dots, \alpha_n)$ is a linear isomorphism (it is exactly the inverse of the multiplication $M_n \times M_n \rightarrow M_n$ given by $(A, B) \mapsto A + B$). 11 (59.3)
