
DiskInternals - Partition Recovery is a high-performance and easy to use specialised DOS utility that can recover data from hard drives with damaged partitions, but also from damaged / destroyed drives.

DiskInternals Partition Recovery is a simple and user-friendly disk repair software that provides you with an easy way to recover lost or deleted partitions. By using DiskInternals Partition Recovery. Alignment-based dose calculation for proton scanning pencil beams using the beamline uncollimated model. The aim of this work was to develop a simple and efficient alignment-based method for using a pencil beam to prescribe the dose distribution to a scanning proton beam. Our approach was to use a pencil beam model with a simple guide structure in order to guide the proton beam in the simulation. The pencil beam was aligned with the gantry rotation axis so as to match a plane in water, which was defined as the proton beamline uncollimated model. The dose distribution prescribed by the pencil beam was then used to generate proton beam positions. The pencil beam dose distribution was created from a multileaf
