The effects of d-limonene and (-)-7-isopropyl-dihydronigualin on the activity of acyl-coenzyme A: cholesterol acyltransferase (ACAT) were investigated in rat liver microsomes. Both compounds inhibited microsomal ACAT with IC50 values in the range of 3.0 to 7.0 mM for d-limonene and 7.0 to 13.5 mM for (-)-7-isopropyl-dihydronigualin. Although the inhibition of ACAT by these compounds is much weaker than that of other ACAT inhibitors such as lecithin:cholesterol acyltransferase inhibitors, they are similar to that of hydrophobic antioxidants such as butylated hydroxyanisole and beta-carotene. In addition, d-limonene inhibited the incorporation of [3H]oleoyl-CoA into cholesterol esters in microsomes to an extent similar to that of (-)-7-isopropyl-dihydronigualin.3.
